Writing GATE Resource Classes in Groovy

Introduction to UIMA
UIMA and GATE compared
Integrating GATE and UIMA

Advanced GATE Embedded

What is UIMA?

- Language processing framework originally developed by IBM
- Similar document processing pipeline architecture to GATE
- Concentrates on performance and scalability
- Supports components written in different programming languages (currently Java and C++)
- Native support for distributed processing via web services

GATE and UIMA GATE in Web Applications GATE and Groovy

Introduction to UIMA
UIMA and GATE compared
Integrating GATE and UIMA

UIMA Terminology

- Processing tasks in UIMA are encapsulated in *Analysis Engines* (AEs)
- In UIMA, AEs can be *primitive* (~ a single PR in GATE terms), or *aggregate* (~ a GATE controller).
 - Aggregate AE can include other primitive or aggregate AEs
- GATE includes interoperability layer to run
 - GATE controller as a (primitive) AE in UIMA
 - UIMA AE (primitive or aggregate) as a GATE PR

Advanced GATE Embedded

5/87

GATE and UIMA GATE in Web Applications

GATE and Groovy

Introduction to UIMA
UIMA and GATE compared
Integrating GATE and UIMA

Key Differences

- In GATE, annotations can have any features, with any values
- In UIMA, feature structures are *strongly typed*
 - Must declare what types of annotations are supported by each analysis engine
 - Must specify what features each annotation type supports
 - Must specify what *type* feature values may take
 - Primitive types string, integer, float
 - Reference types reference to another FS in the CAS
 - Arrays of the above
 - All defined in XML descriptor for the AE

UIMA and GATE

- In GATE, unit of processing is the *Document*
 - Text, plus features, plus annotations
 - Annotations can have arbitrary features, with any Java object as value
- In UIMA, unit of processing is *CAS* (common analysis structure)
 - Text, plus Feature Structures
 - Annotations are just a special kind of FS, which includes start and end offset features

GATE and UIMA
GATE in Web Applications
GATE and Groovy

Introduction to UIMA UIMA and GATE compared Integrating GATE and UIMA

Advanced GATE Embedded

Embedding UIMA in GATE

- Write the mapping descriptor
 - Must ensure that all the annotations and features declared as input capabilities by the UIMA AE are supplied by the mapping.
 - Must not attempt to map to a UIMA FS type that is not declared in the AE's type system.
- For a Java AE, need to get UIMA AE implementation class onto the GATE ClassLoader: define a plugin with just the relevant <JAR> entries:

■ Load this plugin (in addition to the UIMA plugin)

Introduction to UIMA
UIMA and GATE compared
Integrating GATE and UIMA

Embedding UIMA in GATE

tation.

- For C++ AEs, put the implementation library somewhere Java can find it.
- For remote service AEs no additional config is required.
- Create an instance of gate.uima.AnalysisEnginePR ("UIMA Analysis Engine" in GATE Developer)
- Init parameters are URLs to the UIMA AE descriptor XML and the mapping descriptor.
- Runtime parameter is the annotationSetName containing the annotations to map.
 - If you need to map annotations from several sets, use annotation set transfer or JAPE.

Introduction to UIMA UIMA and GATE compared Integrating GATE and UIMA

Embedding GATE in UIMA

- Embedding a GATE CorpusController as a UIMA AE is the mirror-image of this process.
- Controller must be saved as an .xgapp with all PR runtime parameter values (except document and corpus) pre-configured correctly.
- Mapping descriptor format is the same (but <gateAnnotation> in the input section and <uimaAnnotation> in the output section)
- Each <gateAnnotation> or <uimaAnnotation> element can specify an annotationSet attribute, to support mapping to/from several GATE annotation sets.
 - on input create the GATE annotation in this set
 - on output look for the GATE annotation in this set

GATE and UIMA
GATE in Web Applications
GATE and Groovy

Introduction to UIMA
UIMA and GATE compared
Integrating GATE and UIMA

Exercise 1: Embedding UIMA in GATE

Run some of the example UIMA-in-GATE code provided with GATE

- Load the UIMA plugin
- Load plugins/UIMA/examples as a plugin (you'll need to "Add a CREOLE repository")
 - This loads the implementation classes for the example UIMA AEs.
- Load a default ANNIE application
- Create a UIMA Analysis Engine PR with these parameters (relative to plugins/UIMA/examples/conf) and add it to the end of the ANNIE application
 - analysisEngineDescriptor: uima_descriptors/TokenHandlerAggregate.xml

Advanced GATE Embedded

mappingDescriptor: mapping/TokenHandlerMapping.xml

GATE and UIMA
GATE in Web Applications
GATE and Groovy

Introduction to UIMA
UIMA and GATE compared
Integrating GATE and UIMA

Embedding GATE in UIMA

- Include gate.jar, the appropriate JARs from GATE's lib, and uima-gate.jar from the UIMA plugin on classpath.
- GATE provides a skeleton AE descriptor which needs to be customized
 - type system and capabilities to match the GATE mapping
 - external resource bindings to point to the saved .xgapp and the mapping descriptor.
- The AE will initialize GATE if necessary UIMA application doesn't need to know it's embedding GATE.
- For more details, see the user guide

 (http://gate.ac.uk/userguide/chap:uima) and the test directory under plugins/UIMA.

Advanced GATE Embedded

19/87

GATE and UIMA
GATE in Web Applications
GATE and Groovy

Introduction to UIMA
UIMA and GATE compared
Integrating GATE and UIMA

Exercise 1: Embedding UIMA in GATE

- Run the application over a document of your choice Token annotations have a numLower feature giving the number of lowercase letters in the token.
- Code is in plugins/UIMA/examples/src, have a look at the code and the mapping descriptor, see how the mapping is configured.
- Try changing the mapping to map the LowerCaseLetters feature from UIMA to a different name in GATE.
- Other AE descriptors and their associated mappings if you want to experiment further.

GATE and UIMA GATE in Web Applications Introduction to UIMA UIMA and GATE compared Integrating GATE and UIMA

Exercise 2: Embedding GATE in UIMA

- The plugins/UIMA/test directory contains an example UIMA AE descriptor that wraps a GATE application.
- conf/TokenizerAndPOSTagger.xml is an aggregate AE that runs
 - A native UIMA token and sentence annotator
 - The GATE POS tagger to add POS tags to the tokens
- UIMA provides a basic UI to run an AE and inspect the results, which you can run with
 - ../../bin/ant documentanalyser in plugins/UIMA (backslashes on Windows).
 - This starts up the tool with a classpath that includes the relevant JARs to run the GATE application AE.

Multi-threading and GATE Servlet Example The Spring Framework

Introduction

- Scenario:
 - Implementing a web application that uses GATE Embedded to process requests.
 - Want to support multiple concurrent requests
 - Long running process need to be careful to avoid memory leaks,
- Example used is a plain HttpServlet
 - Principles apply to other frameworks (struts, Spring MVC, Metro/CXF, Grails...)

Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework

GATE and UIMA GATE in Web Applications GATE and Groovy Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework

Setting up

- GATE libraries in WEB-INF/lib
 - gate.jar + JARs from lib
- Usual GATE Embedded requirements:
 - A directory to be "gate.home"
 - Site and user config files
 - Plugins directory

GATE and Groovy

Initializing GATE using a ServletContextListener

GATE in Web Applications

GATE and UIMA

ServletContextListener called by container at startup and shutdown (only startup method shown).

GATE in a Multi-threaded Environment

- GATE initialization needs to happen once (and only once) before any other GATE APIs are used.
- The Factory is synchronized internally, so safe for use in multiple threads.
- Individual PRs/controllers are not safe must not use the same PR instance concurrently in different threads
 - this is due to the design of runtime parameters as Java Beans properties.
- Individual LRs (documents, ontologies, etc.) are only thread-safe when accessed read-only by *all* threads.
 - if you need to share an LR between threads, be sure to synchronize (e.g. using ReentrantReadWriteLock)

Initializing GATE using a ServletContextListener

You must register the listener in web.xml

```
GATE and UIMA
GATE in Web Applications
```

```
Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework
```

Handling Concurrent Requests

Naïve approach – new PRs for every request

```
public void doPost(request, response) {
    ProcessingResource pr = Factory.createResource(...);
      Document doc = Factory.newDocument(
           getTextFromRequest(request));
      try {
6
         // do some stuff
9
      finally {
         Factory.deleteResource(doc);
10
11
12
                                       Many levels of try/finally
    finally {
13
                                       - make sure you clean up
       Factory.deleteResource(pr);
14
                                       even when errors occur
15
16
```

GATE and UIMA GATE in Web Applications

Introduction Multi-threading and GATE Servlet Example The Spring Framework

Advanced GATE Embedded

Advanced GATE Embedded

Take Two: using ThreadLocal

Store the PR/Controller in a thread-local variable

```
1 private ThreadLocal<CorpusController> controller =
       new ThreadLocal<CorpusController>() {
    protected CorpusController initialValue() {
      return loadController();
7 };
9 private CorpusController loadController() { ... }
public void doPost(request, response) {
    CorpusController c = controller.get();
    // do stuff with the controller
14 }
                                          4□ > 4回 > 4 = > 4 = > ■ 9 q @
```

GATE and UIMA GATE in Web Applications Introduction Multi-threading and GATE Servlet Example The Spring Framework

Problems with Naïve Approach

- Guarantees no interference between threads
- But inefficient, particularly with complex PRs (large gazetteers, etc.)
- Hidden problem with JAPE:
 - Parsing a JAPE grammar creates and compiles Java classes
 - Once created, classes are never unloaded
 - Even with simple grammars, eventually OutOfMemoryError (PermGen space)

Advanced GATE Embedded

GATE and UIMA **GATE** in Web Applications **GATE** and Groovy

Introduction Multi-threading and GATE Servlet Example The Spring Framework

An Improvement...

- Only initialise resources once per thread
- Interacts nicely with typical web server thread pooling
- But if a thread dies (e.g. with an exception), no way to clean up its controller

Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework

One Solution: Object Pooling

- Manage your own pool of Controller instances
- Take a controller from the pool at the start of a request, return it (in a finally!) at the end
- Number of instances in the pool determines maximum concurrency level

Advanced GATE Embedded

34/87

GATE and UIMA

35 / 8

GATE and UIMA GATE in Web Applications GATE and Groovy Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework

Creating the pool

- Typically to create the pool you would use PersistenceManager to load a saved application several times.
- But this is not always optimal, e.g. large gazetteers consume lots of memory.
- GATE provides API to *duplicate* an existing instance of a resource: Factory.duplicate (existingResource).
- By default, this simply calls Factory.createResource with the same class name, parameters, features and name.
- But individual Resource classes can override this if they know better by implementing the CustomDuplication interface.
 - e.g. DefaultGazetteer uses a SharedDefaultGazetteer
 same behaviour, but shares the in-memory representation of the lists.

◆□▶◆□▶◆豆▶◆豆▶ 豆 かQ@

Advanced GATE Embedded

Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework

Other Caveats

- With most PRs it is safe to create lots of identical instances.
- But not all!
 - e.g. training a machine learning model with the batch learning PR (in the Learning plugin)
 - but it is safe to have several instances *applying* an existing model.
- When using Factory.duplicate, be careful not to duplicate a PR that is being used by another thread
 - i.e. either create all your duplicates up-front or else keep the original prototype "pristine".

Advanced GATE Embedded

38/87

GATE and UIMA
GATE in Web Applications
GATE and Groovy

Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework

Using Spring in Web Applications

- Spring provides a ServletContextListener to create a single application context at startup.
- Takes configuration by default from WEB-INF/applicationContext.xml
- \blacksquare Context made available through the ${\tt ServletContext}$
- For our running example we use Spring's

 HttpRequestHandler interface which abstracts from servlet

 API
- Configure an HttpRequestHandler implementation as a Spring bean, make it available as a servlet.
 - allows us to configure dependencies and pooling using Spring

GATE and Groovy

Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework

Initializing GATE via Spring

applicationContext.xml:

Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework

Loading a Saved Application

To load an application state saved from GATE Developer:

```
1 <gate:saved-application
2     id="myApp"
3     location="/WEB-INF/application.xgapp"
4     scope="prototype" />
```

- scope="prototype" means create a new instance each time we ask for it
- Default scope is "singleton" one instance is created at startup and shared.

GATE in Web Applications
GATE and Groovy

Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework

Duplicating an Application

Alternatively, load the application once and then duplicate it

- <gate:duplicate> creates a new duplicate each time we ask for the bean.
- return-template means the original controller (from the saved-application) will be returned the first time, then duplicates thereafter.
- Without this the original is kept pristine and only used as a source for duplicates.

GATE and UIMA GATE in Web Applications GATE and Groovy

Introduction Multi-threading and GATE Servlet Example The Spring Framework

Tying it together: Spring Pooling

■ Many more options to control the pool, e.g. for a pool that grows as required and shuts down instances that have been idle for too long, and where excess requests fail rather than blocking:

```
1 < gate: pooled-proxy</pre>
     max-size="10"
     max-idle="3"
      time-between-eviction-runs-millis="180000"
     min-evictable-idle-time-millis="90000"
      when-exhausted-action-name="WHEN EXHAUSTED FAIL"
7 />
```

- Under the covers, <gate:pooled-proxy> creates a Spring CommonsPoolTargetSource, attributes correspond to properties of this class.
- See the Spring documentation for full details.

GATE and LIMA GATE in Web Applications Introduction Multi-threading and GATE Servlet Example The Spring Framework

Tying it together: Spring Pooling

```
<qate:pooled-proxy max-size="3"</pre>
                      initial-size="3" />
```

- A bean definition decorator that tells Spring that instead of a singleton mainHandler bean, we want
 - a pool of 3 instances of MyHandler
 - exposed as a single proxy object implementing the same interfaces
- Each method call on the proxy is dispatched to one of the objects in the pool.
- Each target bean is guaranteed to be accessed by no more than one thread at a time.
- When the pool is empty (i.e. more than 3 concurrent requests) further requests will block.

GATE and UIMA
GATE in Web Applications
GATE and Groovy

Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework

Exercise: A simple web application

- To run the example you need ant (use the one in GATE's bin directory if you don't have a standalone copy).
- Edit webapps/gate/WEB-INF/build.xml and set the gate.home property correctly.
- In webapps/gate/WEB-INF, run ant.
 - this copies the remaining dependencies from GATE and compiles the HttpRequestHandler Java code from WEB-INF/src.
- WEB-INF/gate-files contains the site and user configuration files.
- This is also where the webapp expects to find the .xgapp.
- No .xgapp provided by default you need to provide one.

GATE and UIMA
GATE in Web Applications

Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework

Exercise: A simple web application

- In hands-on/webapps you have an implementation of the HttpRequestHandler example.
- hands-on/webapps/gate is a simple web application which provides
 - an HTML form where you can enter text to be processed by GATE
 - an HttpRequestHandler that processes the form submission using a GATE application and displays the document's features in an HTML table
 - the application and pooling of the handlers is configured using Spring.
- Embedded Jetty server to run the app.
- To keep the download small, most of the required JARs are not in the module-8.zip file you already have them in GATE.

Advanced GATE Embedded

51/8

GATE and UIMA
GATE in Web Applications
GATE and Groovy

Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework

Exercise: A simple web application

- Use the statistics application you wrote yesterday.
- In GATE Developer, create a "corpus pipeline" application containing a tokeniser and your statistics PR.
- Right-click on the application and "Export for Teamware".
 - This will save the application state along with all the plugins it depends on in a single zip file.
 - Just accept the defaults in the dialog asking for input and output annotation sets this is necessary for Teamware but not for us.
- Unpack the zip file under WEB-INF/gate-files
 - don't create any extra directories you need application.xgapp to end up in gate-files.

Introduction
Multi-threading and GATE
Servlet Example
The Spring Framework

Exercise: A simple web application

- You can now run the server in hands—on/webapps run ant —emacs
- Browse to http://localhost:8080/gate/, enter some text and submit
- Watch the log messages...
- Notice the result page includes "GATE handler N" each handler in the pool has a unique ID.
- Multiple submissions go to different handler instances in the pool.
- http://localhost:8080/stop to shut down the server gracefully
- Try editing gate/WEB-INF/applicationContext.xml and change the pooling configuration.
- Try opening several browser windows and using a longer "delay" to test concurrent requests.

The Groovy Script PR
Writing GATE Resource Classes in Groovy

Groovy example

Find the start offset of each absolute link in the document.

```
1 def om = document.getAnnotations("Original markups")
2 om.get('a').findAll { anchor ->
3 anchor.features?.href =~ /^http:/
4 }.collect { it.startNode.offset }
```

- def keyword declares an untyped variable
- but dynamic dispatch ensures the get call goes to the right class (AnnotationSet).
- findAll and collect are methods added to Collection by Groovy
 - http://groovy.codehaus.org/groovy-jdk has the details.
- ?. is the safe navigation operator if the left hand operand is null it returns null rather than throwing an exception

200

GATE and UIMA
GATE in Web Applications
GATE and Groovy

Introduction to Groovy
Scripting GATE Developer
The Groovy Script PR
Writing GATE Resource Classes in Groovy

Groovy

- Dynamic language for the JVM
- Groovy scripts and classes compile to Java bytecode fully interoperable with Java.
- Syntax very close to regular Java
- Explicit types optional, semicolons optional
- Dynamic dispatch method calls dispatched based on runtime type rather than compile-time.
- Can add new methods to existing classes at runtime using metaclass mechanism
- Groovy adds useful extra methods to many standard classes in java.io, java.lang, etc.

Groovy example

Find the start offset of each absolute link in the document.

```
1 def om = document.getAnnotations("Original markups")
2 om.get('a').findAll { anchor ->
3 anchor.features?.href =~ /^http:/
4 }.collect { it.startNode.offset }
```

- =~ for regular expression matching
- unified access to JavaBean properties it.startNode shorthand for it.getStartNode()
- and Map entries anchor.features.href shorthand for anchor.getFeatures().get("href")
- Map entries can also be accessed like arrays, e.g.

features["href"]

4□ > 4₫ > 4 Ē > 4 Ē > 9 Q @

Advanced GATE Embedded

61/87

Advanced GATE Embedded

Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

Closures

Parameter to collect, findAll, etc. is a closure

- like an anonymous function (JavaScript), a block of code that can be assigned to a variable and called repeatedly.
- Can declare parameters (typed or untyped) between the opening brace and the ->
- If no explicit parameters, closure has an implicit parameter called it.
- Closures have access to the variables in their containing scope (unlike Java inner classes these do not have to be final).
- The return value of a closure is the value of its last expression (or an explicit return).
- Closures are used all over the place in Groovy

Advanced GATE Embedded

62/87

GATE and UIMA GATE in Web Applications GATE and Groovy Introduction to Groovy
Scripting GATE Developer
The Groovy Script PR
Writing GATE Resource Classes in Groovy

Operator Overloading

- Groovy supports operator overloading cleanly
- Every operator translates to a method call
 - x == y becomes x.equals(y) (for reference equality, use x.is(y))
 - x + y becomes x.plus(y)
 - x << y becomes x.leftShift(y)</pre>
 - full list at http://groovy.codehaus.org
- To overload an operator for your own class, just implement the method.
- e.g. List implements leftShift to append items to the list:

```
['a', 'b'] << 'c'== ['a', 'b', 'c']
```

Advanced GATE Embedded

GATE and UIMA
GATE in Web Applications
GATE and Groovy

Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

More Groovy Syntax

- Shorthand for lists: ["item1", "item2"] declares an ArrayList
- Shorthand for maps: [foo:"bar"] creates a HashMap mapping the key "foo" to the value "bar".
- Interpolation in *double-quoted* strings (like Perl):

```
"There are ${anns.size()} annotations of type ${annType}"
```

- Parentheses for method calls are optional (where this is unambiguous): myList.add 0, "someString"
 - When you use parentheses, if the last parameter is a closure it can go outside them: this is a method call with two parameters someList.inject(0) { last, cur -> last + cur }
- "slashy string" syntax where backslashes don't need to be doubled: /C:\Program Files\Gate/ equivalent to

'C:\\Program Files\\Gate'

Advanced GATE Embedded

63/8

GATE and UIMA GATE in Web Applications GATE and Groovy Introduction to Groovy
Scripting GATE Developer
The Groovy Script PR
Writing GATE Resource Classes in Groovy

Groovy in GATE

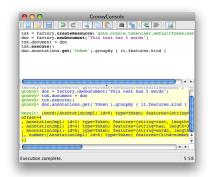

- Groovy support in GATE is provided by the Groovy plugin.
- Loading the plugin
 - enables the Groovy scripting console in GATE Developer
 - adds utility methods to various GATE classes and interfaces for use from Groovy code
 - provides a PR to run a Groovy script.
 - provides a scriptable controller whose execution strategy is determined by a Groovy script.

Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

Scripting GATE Developer

- Groovy provides a Swing-based console to test out small snippets of code.
- The console is available in the GATE Developer GUI via the Tools menu. To enable, load the Groovy plugin.

Advanced GATE Embedded

GATE and UIMA GATE in Web Applications GATE and Groovy

Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

Exercise 1: The Groovy Console

- Start the GATE Developer GUI
- Load the Groovy plugin
- lacktriangle Select Tools o Groovy Tools o Groovy Console
- Experiment with the console
- For example to tokenise a document and find how many "number" tokens it contains:

```
1 doc = Factory.newDocument(new URL('http://gate.ac.uk'))
2 tokeniser = Factory.createResource('gate.creole.tokeniser.
      DefaultTokeniser')
3 tokeniser.document = doc
4 tokeniser.execute()
5 tokens = doc.annotations.get('Token')
6 tokens.findAll { it.features.kind == 'number' }.size()
                                            ◆□▶◆□▶◆□▶◆□▶ ■
                                  Advanced GATE Embedded
```

GATE and UIMA GATE in Web Applications GATE and Groovy Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

Imports and Predefined Variables

The GATE Groovy console imports the same packages as JAPE RHS actions:

■ gate, gate.annotation, gate.util, gate.jape and gate.creole.ontology

The following variables are implicitly defined:

corpora a list of loaded corpora LRs (Corpus)

docs a list of all loaded document LRs (Document Impl)

prs a list of all loaded PRs

apps a list of all loaded Applications (AbstractController)

◆ロト ◆部 ト ◆ 恵 ト ◆ 恵 ・ 夕 ♀ ○

Advanced GATE Embedded

GATE and UIMA GATE in Web Applications GATE and Groovy Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

Exercise 1: The Groovy Console

- Variables you assign in the console (without a def or a type declaration) remain available to future scripts in the same console.
- So you can run the previous example, then try more things with the doc and tokens variables.
- Some things to try:
 - Find the names and sizes of all the annotation sets on the document (there will probably only be one named set).
 - List all the different kinds of token
 - Find the longest word in the document

Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

Groovy Categories

- In Groovy, a class declaring static methods can be used as a category to inject methods into existing types (including interfaces)
- A static method in the category class whose first parameter is a Document:

```
public static SomeType foo(Document d, String arg)
```

- ... becomes an instance method of the Document class: public SomeType foo(String arg)
- The use keyword activates a category for a single block
- To enable the category globally:

```
TargetClass.mixin(CategoryClass)
```

マロケマ部ケマミケマミケー 選

Advanced GATE Embedded

GATE and UIMA GATE in Web Applications GATE and Groovy

Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

Utility Methods

- The Groovy plugin also mixes in the GateGroovyMethods class.
- This extends common Groovy idioms to GATE classes
 - e.g. implements each, eachWithIndex and collect for Corpus to do the right thing when the corpus is stored in a datastore
 - defines a withResource method on Resource, to call a closure with a given resource as a parameter, and ensure the resource is deleted when the closure returns:

```
1 Factory.newDocument(someURL).withResource { doc ->
   // do something with the document
3 }
```

4ロ → 4回 → 4 = → 4 = → 9 9 0

Advanced GATE Embedded

GATE and UIMA GATE in Web Applications GATE and Groovy

Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

Utility Methods

- The gate. Utils class (mentioned in the JAPE module) contains utility methods for documents, annotations, etc.
- Loading the Groovy plugin treats this class as a category and installs it as a global mixin.
- Enables syntax like:

```
tokens.findAll {
   it.features.kind == 'number'
   println "${it.type}: length = ${it.length()}, "
   println " string = ${doc.stringFor(it)}"
5
6 }
```

◆ロト ◆部 ト ◆ 恵 ト ◆ 恵 ・ 夕 Q (*)

Advanced GATE Embedded

GATE and UIMA GATE in Web Applications GATE and Groovy

Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

Utility Methods

- Also overloads the subscript operator [] to allow:
 - annSet["Token"] and annSet["Person", "Location"]
 - annSet [15..20] to get annotations within given span
 - doc.content[15..20] to get the DocumentContent within a given span
- See src/gate/groovy/GateGroovyMethods.javain the Groovy plugin for details.

Introduction to Groovy
Scripting GATE Developer
The Groovy Script PR
Writing GATE Resource Classes in Groovy

Exercise 2: Using a category

In the console, try using some of these new methods:

```
tokens = doc.annotations["Token"]
tokens.findAll {
   it.features.kind == 'number'
}.each {
   println "${it.type}: length = ${it.length()}, "
   println " string = ${doc.stringFor(it)}"
}
```

GATE and UIMA
GATE in Web Applications
GATE and Groovy

Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

The Groovy Script PR

- The Groovy plugin provides a PR to execute a Groovy script.
- Useful for quick prototyping, or tasks that can't be done by JAPE but don't warrant writing a custom PR.
- PR takes the following parameters:

scriptURL (init-time) The path to a valid Groovy script

inputASName an optional annotation set intended to be used as input by the PR

outputASName an optional annotation set intended to be used as output by the PR

scriptParams optional parameters for the script as a FeatureMap

◆□▶◆郵▶◆基▶◆基> ■ 900

Advanced GATE Embedded

75/8

GATE and UIMA GATE in Web Applications GATE and Groovy Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

Corpus-level processing

- Any other variables are treated like instance variables in a PR values set while processing one document are available while processing the next.
- So Groovy script is stateful, can e.g. collect statistics from all the documents in a corpus.
- Script can declare methods for pre- and post-processing:
 - beforeCorpus called before first document is processed.
 - afterCorpus called after last document is processed
 - aborted called if anything goes wrong
- All three take the corpus as a parameter
- scriptParams available within methods, other variables not.

Advanced GATE Embedded

Controller Callbacks Example

Count the number of annotations of a particular type across the corpus

```
void beforeCorpus(c) {
    println "Processing corpus ${c.name}"
    count = 0
4 }
6 count += doc.annotations[scriptParams.type].size()
8 void afterCorpus(c) {
    println "Total ${scriptParams.type} annotations " +
        "in corpus ${c.name}: ${count}"
11 }
```

◆□→◆部→◆草→◆草→ 草

Advanced GATE Embedded

GATE and UIMA GATE in Web Applications GATE and Groovy

Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

The Scriptable Controller

- ConditionalSerialAnalyserController can run PRs conditionally based on the value of a document feature.
- This is useful but limited; Groovy plugin's scriptable controller provides more flexibility.
- Uses Groovy DSL to define the execution strategy.

Exercise 3: Using the Script PR

- Write the Goldfish annotator from the UIMA section as a Groovy script
 - Annotate all occurrences of the word "goldfish" (case-insensitive) in the input document as the annotation type "Goldfish".
 - Add a "numFish" feature to each Sentence annotation giving the number of Goldfish annotations that the sentence contains.
- Put your script in the file hands-on/groovy/goldfish.groovy
- To test, load hands-on/groovy/goldfish-app.xgapp into GATE Developer (this application contains tokeniser, sentence splitter and goldfish script PR).
- You need to re-initialize the Groovy Script PR after each edit to goldfish.groovy

◆ロト ◆部 ト ◆ 恵 ト ◆ 恵 ・ 夕 Q (*)

Advanced GATE Embedded

GATE and UIMA GATE in Web Applications **GATE** and Groovy

Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

The ScriptableController DSL

- Run a single PR by using its *name* as a method call
 - So good idea to give your PRs identifier-friendly names.
- Iterate over the documents in the corpus using eachDocument
- Within an eachDocument closure, any PRs that implement LanguageAnalyser get their document and corpus parameters set appropriately.
- Override runtime parameters by passing named arguments to the PR method call.
- DSL is a Groovy script, so all Groovy language features available (conditionals, loops, method declarations, local variables, etc.).

Groovy Beans

- Recall unified Java Bean property access in Groovy
 - \blacksquare x = it.someProp **means** x = it.getSomeProp()
 - it.someProp = x means it.setSomeProp(x)
- Declarations have a similar shorthand: a field declaration with no public, protected or private modifier becomes a private field plus an auto-generated public getter/setter pair.
- But you can provide explicit setter or getter, which will be used instead of the automatic one.
 - Need to do this if you need to annotate the setter (e.g. as a CreoleParameter).
 - Declare the setter private to get a read-only property (but not if it's a creole parameter).

Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

GATE and UIMA GATE in Web Applications GATE and Groovy

Introduction to Groovy Scripting GATE Developer The Groovy Script PR Writing GATE Resource Classes in Groovy

Example: a Groovy Regex PR

```
1 package gate.groovy.example
3 import gate.*
4 import gate.creole.*
6 public class RegexPR extends AbstractLanguageAnalyser {
    String regex
    String annType
    String annotationSetName
10
    public void execute() {
11
      def aSet = document.getAnnotations(annotationSetName)
12
      def matcher = (document.content.toString() =~ regex)
13
      while (matcher.find()) {
14
        aSet.add(matcher.start(), matcher.end(),
15
            annType, [:].toFeatureMap())
16
17
18
19 }
```
